

UV Inks

UV Silver TK-SO

"UV Silver TK-SO", UV curing silver ink, excels in brilliance and transferability.

■ Feature

- ▶ Excels in brilliance (coloring).
- ▶ Excels in transferability and enables good consistency effects.
- ▶ This ink maintains its brilliance and does not easily gelate with the passage of time.
- ▶ Excellent curing and printability.

■ Handling Instructions

- ▶ Though this ink is applicable to commercial printing and paper products, its design gives more importance to brilliance and so it tends to be less rub resistant than general UV inks. Protect the silver ink side of the print by coating it with OP varnish when rub resistance is required.
- ▶ Better brilliance is achieved when UV ink is used for under-print.
- ▶ Metallic inks should be stored in a refrigerator (below 10 °C).
- ▶ It is designed not to gelate or lose its brilliance with the passage of time. However, the brilliance does not remain same as it is at the delivery when stored for long periods, so we recommend the earliest possible use.
- ▶ Though this ink can be kneaded with "UV L Carton" or "UV 161" to create special color ink, but this causes decline in preservation stability. Therefore, when metallic inks are mixed with color inks the ink thus kneaded should be used completely, and not stored.
